Announcement of the launch of industrial printers CL4-SXR and CL6-SXR

SATO Corporation (the "Company") today announced that it will launch its new industrial printer models, the CL4-SXR and CL6-SXR (collectively, the "Products"), as outlined below.

1. About the Products

The CL-SXR series, succeeding our flagship CL-NX series, represents the next generation of industrial printers designed to meet the evolving needs of modern workplaces by combining high productivity with sustainability. The Products support flexible label printing through application integration and are equipped with security features compliant with global regulations and directives, serving diverse needs in international markets.

Equipped with a large full-color touchscreen, the printers offer excellent visibility and intuitive operation. With self-diagnostic capabilities and online support, the printers enable predictive maintenance and users' self-servicing, helping businesses maximize operational efficiency and reduce downtime.

Environmentally friendly features include the use of recycled ABS resin in housing components and a function that eliminates label waste from the very first print, reducing environmental impact.

CL4-SXR

2. Launch schedule

Sales will begin in January 2026, with phased rollouts in international markets.

* RFID-enabled models are planned for release later in 2026.

3. Impact on financial results

The impact of the Products on the Company's consolidated net sales is currently under assessment. The Company will promptly disclose any matters requiring announcement as they arise.

4. Special expenditures

There are no significant expenditures specifically related to the launch of the Products at this time.
